

Curriculum

A new world order is emerging and knowledge perspectives are becoming increasingly global to keep pace with the demands of the changing times. We have, accordingly, structured our academic institution to provide access to the benefits of a unified education system that grooms global citizens of tomorrow. We intend evolving a distinctive scholastic pattern by fostering an international community of students, learners and the learned.

Keeping ourselves acquainted with the relevant intellectual developments, scientific innovations, technological advancements, economic progressions and socio-political changes taking place around, we aim to establish a comprehensive and dynamic system of knowledge acquisition which is a fusion of ethical learning and the best of international education.

We shall remain committed to introducing modern approaches in curriculum design and implementation, improving practical skills and promoting informed dialogue at various academic levels within and outside the precincts of the school.
